- **gnome-terminal**
- **konsole**
- **xterm**

## ls - list directory contents

ls [OPTION]... [FILE]...

List information about the FILES (the current directory by default). Sort entries alphabetically if none of -cftuvSUX nor --sort.

Almost every command has a numerous switches to use.

**ls -a**

**ls -l**

**ls -lh**

**ls -1**

**Easiest way to know how to use linux command is by using manual.**

**man ls**

**pwd - print name of current/working directory**

```
vlada@graph:~$ pwd
```

```
/home/vlada
```

```
vlada@graph:~$
```

**cd - change directory**

**absolute and relative path/addressing**

**. - current folder**

**.. - folder up**

**~ - home folder**

**/ - system root**

**mkdir - make directories**

**cp – copy**

**cp <path/filename> <newpath/newfilename>**

**cp -r**

**cp -a**

**mv – move**

**mv <path/filename> <newpath/newfilename>**

**rm – remove**

**rm <path/filename>**

**rm -r**

**rm -f**

```
-rw-r--r-- 1 scl users 180 2008-11-17 14:51 linux
```

```
chmod ugo+w <path/filename>
```

```
chown username:groupname <path/file>
```

**cat - concatenate files and print on the standard output**

**cat [OPTION] [FILE]...**

**Concatenate FILE(s), or standard input, to standard output.**

**less <filename>**

**/<text> - find**

**q – quit**

**Less is a program similar to more , but which allows backward movement in the file as well the forward movement.**

**joe <filename>**

**CTRL+k h – help on/off**

**CTRL+c – exit**

**CTRL+k s – save**

**CTRL+k x – save and exit**

## Secure shell

**ssh** username@host.domain

**ssh (SSH client)** is a program for logging into a remote machine and for executing commands on a remote machine.

**ssh** username@host.domain **command**

## Secure copy

```
scp user@host.domain:path/file user1@host1.domain1:path1/file1
```

```
scp -r : secure copy directories
```

scp copies files between hosts on a network. It uses ssh for data transfer, and uses the same authentication and provides the same security.

**ps**

**ps aux**

**Report a snapshot of the current processes.**

**top**

**Display Linux tasks**

**kill**

**Send a signal to a process**
